Maximum ease of use

MagniLink Vision Basic FHD is an easy-to-use video magnifier that offers users with impaired vision all the necessary functions. Simply a modern and flexible video magnifier that is both ergonomic and user-friendly.

Plug and play
Connect MagniLink Vision Basic FHD to a power outlet, start the product and you are ready to start using your video magnifier!

Easy for everyone
MagniLink Vision Basic FHD is incredible easy to use, which makes it very popular even among older users.

The video magnifier has tactile control knobs or buttons, which are ergonomically placed directly below the screen. You can choose between a 3-knob or 5-push panel. The screen can be adjusted in height, is tiltable and is available in two different sizes. Choose between a 24" or 27" screen in widescreen format.

Stable reading table
MagniLink Vision Basic FHD is equipped with a high-quality reading table, which has friction brakes in the X and Y directions. The brakes can be used to provide higher resistance when the reading table is moved sideways and/or forwards/backwards. They can also be used to lock the reading table during transport.

Image quality and design
The video magnifier has a flicker-free and stable image with high contrast and clear colors. MagniLink Vision Basic FHD is ergonomically designed for maximum ease of use and has a screen with a slim design for a modern expression.

Features and benefits
- High quality.
- Easy-to-use control panel with logical and tactile knobs or push buttons.
- Screen in widescreen format with high contrast and brightness.
- Stable and robust reading table.
- High image quality (FHD) with stable, flicker-free image.
- Modern LED lighting for even light level over the entire reading table.
- Good ergonomics.

3-knob panel

5-push panel

Listen and read at the same time
There is also a version of MagniLink Vision Basic with TTS where you get the best of both worlds – a high-quality video magnifier and a reading machine in the same product. The system is equipped with a built-in speaker and software for a speech function so you can have your texts read aloud. This leads to increased reading speed, endurance and a more relaxed reading. The spoken text is synchronized with the text on the screen. You choose how you want the text to be presented, for example word by word or line by line.

Easy to use
To OCR a text and have it read aloud, use the included external controller - just press the orange button and the text will be converted to speech!

The TTS option cannot be selected afterwards but must be ordered at the time of purchase as the speaker is factory installed.
